

Packing Hook Extractor Kit

FEATURES

Flexible compression packing extractors and hooks are mainly used for packing installation and packing removal from different shape space, and the braided packing tool is easy to carry, economical and practical.

The rigid and flexible packing pull-out rod can be used to fix or replace the joint.

The size and stability of the pull-out rod is sufficient to ensure that the most difficult packing can be taken out. This greatly improves the efficiency of work.

Material composition:

High-grade flexible packing-extractor made from coiled steel. T-handle made from corrosion-protected steel, mounted on the flexible spindle. Thread mandril for the tempered exchangeable tips.

Directions for use:

As the packing extractors come in different sizes, packing rings of almost all cross sections can be removed. To dislodge used packing rings, turn the screw tip into the packing ring in a clockwise direction. The packing-extractors retain their flexibility also under extreme working conditions.

The screw-tips are subject to wear and tear, the flexible spindle does not wear with normal use.

The extractors are supplied in a range of different sizes, all with exchangeable tips.

Safe, convenient and durable. 23 pcs braided packing tool sets includes:

- 6 removable handles hooks (3 lengths)
- 9 pcs rotary hook heads (3 sizes)
- 3 threaded drill bits (3 sizes)
- 3 curved crochet hooks (3 types)
- 1 bent plate head
- 1 sturdy all-plastic tool box.
